Choosing an Inertial R&O Partner For Your Fleet

As you extend the life of your fleet, choosing an R&O partner who can meet your specialized needs is critical. As the leader for legacy and mature INS R&O solutions, Navhouse delivers lower program costs, extended INS life and greater customer satisfaction.

See what the leader can do for your fleet:

- **Turnaround Time (TAT)** – Navhouse sets the industry benchmark with a 15 day TAT on standard INU repair and overhauls.
- **Reliability** – Navhouse sets the benchmark for inertial product reliability, using extensive adverse condition testing to identify latent INU defects in our facility, not in your aircraft. And, all our inertial repairs are backed by Navhouse's comprehensive warranty program.
- **Accuracy** – Navhouse exceeds the industry benchmark for inertial repair and overhaul accuracy, exceeding the ARINC standard for gyro drift. That means your fuel burn is significantly lessened during your missions.
- **Expertise** – As much as 50% of INS damage can occur in shipping, so Navhouse developed NavFoam, a proprietary packaging technology engineered to ensure your components are flight ready upon receipt.
- **Real-time Support** – Navhouse's leading team of navigation experts is ready to answer your most demanding questions, on your schedule.
- **Lifecycle Management** – Our NavTrack INU tracking service helps troubleshoot INU problems that may be aircraft or operator related, lowering the overall costs of your maintenance program.
- **Full-service** – Navhouse is the only non-OEM INS R&O facility providing Level I through IV repair services, making Navhouse your sole source for your fleet's INS repairs.

Your Leader for Legacy and Mature INS Solutions

Being the leader means more than just repairing your INUs and instruments.

We go out of our way to earn your business.

Whether it's commercial or military, air, land or sea, Navhouse is the total solution for your fleet's legacy and mature INS.
